Table 3--SUMMARY OF NET CAPITAL INFLOW (in £) DERIVED FROM LABOR EMIGRATION BY SOURCE COUNTRY (1965-67)*

Year	1965	1966	1967
Total	2,389,060	2,430,029	2,313,132
South Africa	1,905,389	1,824,978	1,717,349
Rhodesia	310,642	271,503	272,337
Zambia	173,029	333,548	323,446

*Report of the Malawi Ministry of Labour, 1963-67, p. 41. Includes Wenela and Mtandizi expenditures in Malawi on local salaries.

Digest of Statistics, 13,690 Malawians entered Rhodesia in 1966 while 19,860 de- parted--a difference of 6,170). Between 1965 and 1967, the average of 12.4 mil flowing into the country placed migrant income third in earnings behind tea and tobacco. In 1969 the predicted net capital inflow from migrants was over [illegible] (Malawi 1963/67). This does not include money and goods brought home by indi In 1960, Arthur Hazlewood wrote:

> There can be few countries so dependent on the opportunities open for employment outside their borders; and despite the undoubted social evils of migration, and the retarding effect which it may also have on economic development in Nyasaland, there is no doubt that a marked reduction in the number of migrant workers would greatly worsen economic conditions within the territory (p. 81).

The entire question of the internal effects of labor migration on Malawi social and economic development requires further study. Professor Pachai (19 has pointed out the role of returned migrants in early native associations and independent church movement; and Martin Chanock has written that Malawi achieved its independence "through successful peasant revolt" (1972, p. 113). Taking these observations as a beginning point, it would be interesting to investigate the played by migrants and their descendants in Central Africa's political develop The economic impact of migrant-produced capital on Malawi should be researched Although some men have accumulated enough money to purchase retail businesses, maize mills, lorries, and cattle, others continue to buy expensive prestige such as cameras, watches, and large radios which must be sold at a loss when financial crises occur. Insolvency brings about a repetition of the migrant with some men making as many as fourteen trips to South Africa. Both Van Velsen (1960) and Watson (1958) have stressed the importance of the availability of land as social security for migrant laborers during economic depressions or old age This need for land means that many emigrants preserve their interest in tribal organization and politics thereby maintaining ethnic cohiveness. The relation of migrants to Malawi government's long-range plans to replace traditional land tenure arrangements with private ownership of land is a vital area of study. Finally, the migrant as an increasingly "proletarianized" person is an aspect of social change in Malawi worth examination.
